Firmware for TN-4900 Series Release Notes

Version: v3.32	Build: 26101415
Release Date: Oct 28, 2026	

Applicable Products

TN-4900 Series

Supported Operating Systems

N/A

New Features

- Added duplicate IP detection.
- Added Domain Protection.
- Added Diagnostic Logging Profile.

Enhancements

- Added "Email" tab for checking 2-Factor Authentication email server information.
- Added custom ports for SNMP.
- Added configurable SNTP query interval.
- Added configurable VRRP checksums to support both RFC-5798 and RFC-9568.
- Added MIB file support for RFC 2578.
- Added an event log for failed NTP/SNTP time synchronization requests.
- Increased the maximum number of firewall rules to 2048.
- Increased the number of NTP servers supported by DHCP Option 42 to two.

Bugs Fixed

- SIP ALG RTP pinholes blocked by L3–L7 policy default deny rule.
- Routing may become unstable, interfering with traffic forwarding.
- DHCP server may not respond to DHCP Discover packets.
- LAN connectivity disruptions during prolonged operation.
- DHCP Offer packets missing Option 3 when the Option 121 Default Gateway enabled.
- Software Package Management page slow, fails to install security packages.
- Configuration not reverted after a failed restoration process.
- SNMP traps and syslog report port events unreliably reported when firewall rules have low matching traffic.
- Repeated restarts and cycling of STATE LED.
- OSPF Router ID incorrectly uses default IP address from VLAN 1.
- Missing UUID length validation in the web console.
- VRRP packets contain incorrect checksums.
- DNS server fails when DNS forwarding uses the same domain.
- SNMP service cannot use custom port numbers.

Changes

- Added requirement to change default password on first sign in.

Notes

N/A

Version: v3.24	Build: 26041517
Release Date: Apr 15, 2026	

Applicable Products

TN-4900 Series

Supported Operating Systems

N/A

New Features

• Added Directed Forwarding.
• Added Neighbor MAC Change events.
• Added Connection Management.
• Added support for establishing IPsec connections using domain name.
• Added DHCP option 7.
• Added port-naming mode command for consistent port identification for TN-4916-4GTX. (CLI only)

For details, please refer to the product web page and user manual.

Enhancements

• SNMP/SNMP Trap supports SHA-256 and SHA-512 authentication.
• Port Usage Alarm supports SNMP Trap.
• Tech Support File allows users to generate and import files for troubleshooting.
• Ping tool supports selecting source interface.
• WAN Redundancy feature supports configuring domain names as ping hosts for each interface.
• RSA key supports 3072- and 4096-bit key length for Certificate Signing Request function.
• The login message supports commas (,).
• The System Event Summary supports displaying the number of events in the last 24 hours.
• Increased maximum number of VLANs/LANs.
• Object Management supports FTP Passive mode.
• Supports creating SNMP accounts.
• Supports Object Grouping: multiple IP addresses, subnets, and IP ranges.
• Supports display of local ETBN ETB IP addresses.

Bugs Fixed

• Intermittent ping loss occurs during link-down events.
• Multicast packet duplication under ETBN redundancy.
• TACACS does not work when using FW v3.21 and later.
• Unable to use bridge port as the redundant port.
• Port numbers in Web GUI do not match device labels.
• MAC-table VLAN sorting does not work.
• SNMPv3 fails after importing a configuration.
• FTP communication with LF newline characters fails.
• Physical IP addresses do not respond to ComID 130 packets under ETBN redundancy, and only the VRRP IP responds.
• ETBN consist information configured via configuration import is missing after rebooting.
• ETBN leading conflict issues.
• ETBN inauguration becomes slow when ETB ports are disabled via SNMP.
• TN-4916-4GTX, inconsistent port identification.
• IPSec configuration always uses WAN interface.
• TN-4900 firewall behavior is different from TN-5916 (TN-4900 firewall needs to support FTP passive mode.)
• SNMP Account settings cannot be exported to configuration file when selecting Trap V1 or V2 in

SNMP Trap/Inform.
• [CVE-2026-3867] vulnerability issue(s). For more details, search the Security Advisories section on the Moxa website for the following Security Advisory ID: [MPSA-261521].
• [CVE-2026-3868] vulnerability issue(s). For more details, search the Security Advisories section on the Moxa website for the following Security Advisory ID: [MPSA-261521].
• An error occurs when viewing LLDP entries through the web interface or via SSH.
• Rate limit does not work after device reboot.
• Link-up failure after device reboot.
• Fails to import configuration file.
• CPU usage reaches 100% after uploading security package v13.0.28.
• Page freezes when Asset Recognition is enabled.
• Trap information for MAC address table changes is incorrect.
• Web wizard not configured correctly for all port bridge interfaces.
• Cannot get up-to-date SNMP OID values through SNMP.
• Enabling firewall functions causes instability in LHC packets.
• Unexpected Turbo Ring v2 topology changes.
• DNS setting not working.
• Web interface not accessible via HTTP after HTTPS is disabled.
• OpenVPN client configurations occasionally fails to import.

Changes

• IPSec supports LAN interface connections.

Notes

• Firewall throughput values are subject to minor variations due to ongoing feature implementation and security enhancements in this version. Overall performance metrics may fluctuate marginally depending on the packet size.
• Static Multicast Route NAT Issue: The initial packet fails to be translated after a reboot or config change, while subsequent packets are processed correctly.
• Under specific configurations where IEC 61375 functions are enabled, the TN-4916-ETBN may experience intermittent link status anomalies and unexpected event logs. A system reboot will restore the device to normal operation.
• IPS cannot trigger events and relay warnings after the device reboots.

Version: v3.22	Build: 25102916
Release Date: Nov 07, 2025	

Applicable Products

TN-4900 Series

Supported Operating Systems

N/A

New Features

N/A

Enhancements

N/A.

Bugs Fixed

• The network interface configured for port trunking fails to activate correctly.

Changes

N/A

Notes

• Configuring a static multicast route for multicast streams prior to setting up a static multicast MAC to specify forwarding ports will result in misconfiguration. To mitigate this issue, configure the static multicast route last or reboot the device.

Version: v3.21	Build: 25100115
Release Date: Oct 15, 2025	

Applicable Products

TN-4900 Series

Supported Operating Systems

N/A

New Features

• Added a mechanism to detect syslog server availability.
• Added support for the device to function as a RADIUS server.
• Added support for DHCP Option 121 configuration.
• Added NAT support for SIP and VoIP ALG.
• Added support for DNS forwarding.
• Added a notification feature for soon-to-expire licenses.

Enhancements

• Expanded the number of bridge zones to eight sets.
• Enhanced the DPI configuration parameters for the TRDP protocol.

Bugs Fixed

• CVE-2025-6892, CVE-2025-6893, CVE-2025-6894, CVE-2025-6949, CVE-2025-6950 vulnerability issues. For more details, search the Security Advisories section on the Moxa website for the following Security Advisory ID: MPSA-258121.
• Lead commands do not work when passing through redundant consists.
• Lead commands from an ECSC do not work when passing through redundant consists.
• Both the virtual IP and local IP are transmitting ComID 121 in the ETBN redundant scenario.
• The system time shows incorrectly after importing a configuration file.
• When configuring multiple trunk groups with a different description, the web interface incorrectly uses the last-configured description for both groups.
• When adding a static multicast MAC address, the changes will only take effect after rebooting instead of immediately, as intended.
• The Fault LED indicator status in the Device Summary section in the web interface shows incorrectly until the browser is refreshed.
• If an L3-L7 policy rule is enabled, traffic will be blocked for additional 10 seconds after booting up.
• When failing to import a configuration file containing errors, the line(s) containing the error reported by the system are incorrect.
• If account authority levels in the configuration are not defined according to a specific sequence ('admin' [privilege 1] > 'supervisor' [privilege 2] > 'user' [privilege 3]), importing the configuration will fail.
• If the WAN interface is not configured yet, configuring N-to-1 NAT for LAN-to-WAN via the Setup Wizard will result in incorrect settings being applied to the router, subsequently causing configuration file imports to fail .
• Using the reserved keyword 'Any' to name an interface or object will result in incorrect configuration for Layer 3-7 firewall policies.
• The interface IP address associated with a port-based bridge is deleted when the bridge type is changed to zone-based and then changed back to port-based.

Changes

• User accounts can now be disabled without having to change the password of the respective account first.

Notes

N/A

Version: v3.13	Build: 24100800
Release Date: Oct 09, 2024	

Applicable Products

TN-4900 Series

Supported Operating Systems

N/A

New Features

• Added support for the Loopback Interface function.
• Added support for event-triggered actions to the VRRP function.
• Added support for UDP-Flood to the DoS Policy function.
• Added SNMP Trap as a Log Destination for the Layer 2 Policy function.
• Added support for additional event log export formats: .pdf, .csv.
• Added a CPU usage threshold alarm to the Event Notifications function.
• Added a port usage threshold alarm to the Event Notifications function.
• Added support for Step7 Comm+, OPC UA, and MELSEC to the Advanced Protection function.
• Added support for save and restore to the Custom Default function.
• Added support for the DNS Server function in Network Service.

Enhancements

• Enhanced the following IPsec algorithms:
  - Encryption: AES-256-GCM
  - Hash: SHA-512
  - DH Group: DH15 (modp3072), DH16 (modp4096), DH17 (modp6144), DH18 (modp8192), DH22 (modp1024s160), DH23 (modp2048s224), DH24 (modp2048s256), DH31 (curve25519)
  - PRF: PRF SHA-256, PRF SHA-384, PRF SHA-512
• Added a syslog option for VRRP State Change notifications.
• A detailed log message will now be recorded when importing a configuration fails.
• Supported Multiple Static Multicast Route Rules can be created with the same group address & outbound interface but different inbound interfaces.
• Added support for DHCP error logs in Event Notifications.
• Added support for IGMP Snooping error log in Event Notifications.
• Added support for the TRDP protocol to the Advanced Protection function in the CLI.
• Added support for RFC 5424 format for syslog messages.
• Added support for Default Action Log to the Layer3-L7 Policy function.

Bugs Fixed

• The "Login Authentication Failure Message" does not save properly.
• Using the newline character (\n) in the 'Login Message' and 'Login Authentication Failure Message' causes abnormalities in the output.
• The system is unable to ping the VRRP virtual IP.
• Users are able to bypass password policy violation warnings by pressing ESC on the keyboard.
• Time zone settings are not saved if GMT is set to 0.
• Port-based DHCP provides the same IP if those ports are member ports of a created bridge interface.
• RSTP is not functioning correctly over VLAN trunk ports.
• RSTP on VLAN trunk ports is causing a dual root device situation.
• Only one static multicast address can be configured at a time using the CLI or web import.
• SNMP OID returns an additional "\n" character.
• NAT is not working after reboot.
• op-up window will stay after auto logout.

• CVE-2024-6387 vulnerability issue. For more details, search the Security Advisories section on the Moxa website using the following Security Advisory ID: MPSA-246387.
• CVE-2024-9137, CVE-2024-9139 vulnerability issues. For more details, search the Security Advisories section on the Moxa website using the following Security Advisory ID: MPSA-241154.
• CVE-2024-1086 vulnerability issue. For more details, search the Security Advisories section on the Moxa website using the following Security Advisory ID: MPSA-249807.

Changes

• Changed the IPS license expiration behavior: When the license expires, IPS functionality will remain enabled, but IPS patterns will no longer be updated.
• Changed the Trusted Access behavior: Trusted Access now applies to the Web UI, CLI, and New Moxa Command interfaces.
• Changed the Preempt Delay range for the VRRP function from 10 to 300 to 0 to 300.
• Changed the maximum password and shared key length to 64 characters.
• The password and shared key now support special characters.

Notes

• If you encounter unexpected behavior with ECSP control packets, try disabling the Trusted Access Function first. If the issue persists, please contact the Moxa Technical Support team.

Version: v3.6	Build: 24032802
Release Date: Mar 29, 2024	

Applicable Products

TN-4900 Series

Supported Operating Systems

N/A

New Features

• Adds the Fault LED to the hardware interface.

Enhancements

• Enhances and hardens the command injection method to increase security and prevent attacks.

Bugs Fixed

• A display error in the listing of available characters for the password policy.

Changes

• Changes the DoS Policy for Flood Protection to allow independent limit ranges for each interface.
• Changes ETBN functionality to enable status acquisition of master and backup via TRDP when using VRRP.

Notes

N/A

Version: v3.4	Build: N/A
Release Date: Jan 26, 2024	

Applicable Products

TN-4900 Series

Supported Operating Systems

N/A

New Features

• Added support for TACACS+ authentication.
• Added Port Disable ingress action for Rate Limit function.
• Added support for LAN ID to DHCP Option 82 in the DHCP relay agent.
• Added support for Proxy ARP for LAN interfaces.
• Added support for Soft Lockdown mode to the Firewall function.

Enhancements

• Increased maximum number of static multicast entries from 256 to 1000.
• Increased the maximum username length to 32 characters for local account, SNMP, RADIUS, and IEEE 802.1X authentication.
• Increased the maximum length of passwords, communities, and shared keys to 64 characters for local account, SNMP, RADIUS, and IEEE 802.1X authentication.
• Unified the range of supported special characters for local account, SNMP, RADIUS, and IEEE 802.1X.

Bugs Fixed

• Network statistics values are inaccurate when using ports for measurement.
• The IP packets of IGMP do not contain a router alert.

Changes

N/A

Notes

N/A

Version: v3.0	Build: N/A
Release Date: Aug 30, 2023	

Applicable Products

TN-4900 Series

Supported Operating Systems

N/A

New Features

• Added support for Network Security Package version 7.0 or higher (including TRDP protocol filter objects).
• Added the Auto Create Source NAT setting for 1-to-1 NAT.
• Added a Range option for the 1-to- 1 NAT Destination IP Mapping Type.
• Added support for user-defined Engine ID to the SNMP function.
• Added support for SFTP to the Configuration Backup and Restore function.
• Added support for Firmware Version Checking to the Configuration Backup and Restore function.
• Added support for Password Max-life-time to the Password Policy function.
• Added support for NTP Authentication to the System Time function.
• Added support for Syslog Authentication to the Syslog function.
• Added support for Layer 2 Policy firewall logs to the Event Log function.
• Added support for DHCP Relay Agent to the DHCP server function.
• Added support for Intrusion Prevention System (IPS) functionality through Network Security Packages.
• Added Session Control Firewall Policy settings to the Firewall function.

Enhancements

• Compliance with the IEC 62443-4-2 industrial cybersecurity standard.
• Increased the maximum DHCP lease time from 99,999 to 527,039 minutes.
• Increased the maximum number of Zone-based Bridge interfaces from 2 to 4.
• Increased the maximum number of VLANs from 16 to 32.
• Increased the maximum number of Static Multicast Table entries from 128 to 256.
• Updated the web user interface to the latest next-generation design.
• Layer 3-7 firewall policies are now object-based for better rule management.
• Improved firewall log categories and information layout for better readability.

Bugs Fixed

• Enabling Bridge Mode may sometimes cause the system to perform a cold restart.
• Users are unable to change the VID of the Management VLAN.
• The SNMP encryption key incorrectly allows the use of illegal characters.
• When specifying a 64-character long IPsec pre-shared key, the system will incorrectly store it as 63 characters long.
• The SSH connection will randomly disconnect when using a non-default port configuration.
• Importing configurations will fail if Daylight Saving is enabled.
• The auto logout function of the login policy does not function properly.
• Enabling the Digital Input notification causes the STATE LED to turn red.
• Static routing does not function properly after enabling dynamic routing.
• The Turbo Ring becomes unstable after enabling the NTP/SNTP server.

Changes

• Changed the HTTP port range from 1-65535 to 1024-65535 (default port: 80).
• Changed the HTTPS port range from 1-65535 to 1024-65535 (default port: 443).
• Changed the Telnet port range from 1-65535 to 1024-65535 (default port: 23).

• Changed the SSH port range from 1-65535 to 1024-65535 (default port: 22).
• Changed the maximum length of the Bridge Zone name from 13 to 12 characters.

Notes

• Due to significant changes made in this firmware release, configuration files of previous firmware versions are not compatible with this version. Please create a new configuration using this firmware version. If you encounter issues when using this new firmware, please contact Moxa technical support.

Version: v1.2	Build: N/A
Release Date: Dec 28, 2022	

Applicable Products

TN-4900 Series

Supported Operating Systems

N/A

New Features

• Added support for PoE.
• Added support for DHCP Client Option 66/67/82.
• Added support for DHCP Relay Agent.
• Added support for Security Wizard (MXview).

Enhancements

• The CLI now supports digital signatures and data encryption.
• [IEC-61375-2-3] Local consist information now includes vehProp and cstProp.

Bugs Fixed

• [IEC-61375] If the device configuration contains IEC-61375 local-consist-info vehicle settings, importing the configuration will fail.
• [IEC-61375] NAT rules are not being applied correctly when using EBTN functions at the same time.
• [Rate Limiting] If the default Ingress Policy settings are changed, the Rate Limit function will behave abnormally and cause Rate Limit configuration importing to fail.
• [Firewall] Firewall Layer 2 policies do not work properly on zone bridge interface VLANs.
• [Event Log] When the topology is changed while using RSTP, the system does not record a topology change event log.
• [Turbo Ring v2] Incompatibility with some Moxa L2 switches.
• [Turbo Ring v2] Turbo Ring v2 becomes unstable when links are changed.
• [System File Update] The settings of VLAN 61375 change from Trunk to Access PVID 1 after importing the device configuration.
• [DHCP Server] The IP port binding entry cannot be set if the DNS Server 2 and NTP Server values have not been specified.
• [Bridge mode] Users are unable to set the IP of the bridge interface port.
• [MAC Address Table] The MAC address table filter function does not work when the device has trunk groups.
• [Certificate Management] The Local Certificate information shows incorrectly after importing a certificate.
• [RSTP] RSTP uses 50 to 60% of the CPU.
• [SNMP] After exporting the configuration file, the SNMP encryption type is incorrect.
• [Security] The 802.1X Server Key and PPTP password are not encrypted in the configuration file.
• [CLI] Some CLI descriptions are incorrect.
• [Web] The LAN (non-management VLAN) setting changes from Disable to Enable after exporting and importing the configuration back to the system again.
• [CLI] The NAT redundancy command is unable to set the VRRP binding index.
• [System File Update] Importing a configuration will fail when the web interface login message and login authentication failure messages are configured to the maximum character length.
• [Web] The number of system events recorded in the web and CLI interface is different.
• [Vulnerability] MPSA-221103
• [Vulnerability] MPSA-221105
• [Vulnerability] MPSA-221106
• [Vulnerability] MPSA-221201

Changes

• Removed unsupported functions from the web interface (Fiber, Relay).

Notes

N/A
