Introduction

The AWK-4262A Series is engineered for reliable wireless connectivity in harsh outdoor environments such as mining, oil and gas, and transportation. Its robust enclosure provides superior protection against the elements, combined with antenna and power isolation to protect against ESD and power surges. The built-in 2.4/5 GHz band-pass filter minimizes out-of-band interference while the Wi-Fi 6 OFDMA and spatial reuse technologies ensure stable connections in crowded networks.

Featuring AeroMesh technology, the AWK-4262A Series simplifies network deployment where cabling is impractical or costly. Self-forming and self-healing wireless paths speed up deployment and configuration in highly dynamic applications while minimizing downtime.

Tailored Industrial Wireless Technology

- Auto Channel Selection automatically scans and selects the optimal operating channel based on real-time analysis to minimize interference and enhance wireless performance
- AP-agnostic seamless roaming with client-based Turbo Roaming[1] for sub-150 ms roaming recovery times between APs (in Client mode)
- 802.11k/v/r Fast Roaming enables faster, more reliable Wi-Fi client roaming and improved third-party interoperability
- DFS channel support for a wider range of 5 GHz channels to avoid interference from existing wireless infrastructure
- AP-based client disconnection mechanism to help wireless clients without roaming intelligence obtain optimal AP services
- Universal (UN) models with configurable country for more flexible global deployment
- Dedicated MXview Wireless network management software with dynamic topology view, interactive roaming history playback, and detailed device information and performance indicator charts
- Troubleshooting SSID functionality for client-based operation modes activates a temporary SSID when the connection to the AP to perform wireless diagnostics
- Latest WPA3 encryption for enhanced wireless network security

Industrial Compliance and Certifications

- CC-Link IE TSN certified time-sensitive performance required to integrate wireless devices into advanced factory automation networks
- Compliant with EN 18031-1 to ensure both EU regulatory alignment and enhanced protection against cyberthreats

1. The Turbo Roaming recovery time indicated herein is an average of test results documented, in optimized conditions, across APs configured with interference-free 20-MHz RF channels, WPA2-PSK security, and default Turbo Roaming parameters. The clients are configured with 3-channel roaming at 100 Kbps traffic load. Other conditions may also impact roaming performance. For more information about Turbo Roaming parameter settings, refer to the product manual.
