Introduction

The goal of fast roaming capability is to allow clients to maintain their communications as they move from one access point to another. Moxa’s WAC-M300 Series advanced wireless access controller with controller-based Turbo Roaming technology enables millisecond-level roaming between different IP subnets. The advanced roaming algorithm combined with Mobile IP technology allows seamless roaming while maintaining stringent security in demanding network scenarios. The rugged WAC-M300 Series is rated to operate in temperatures of 0 up to 50°C and suitable for on-site installation in harsh industrial environments..

Maximum Availability

- Device-level redundancy via hot standby controller

Minimum Handover Time

- Millisecond-level Turbo Roaming
- Inter-controller roaming
